

THE NEW OPTILIFE DOCTOR BLADE EXCLUSIVELY FOR GRAVURE APPLICATIONS. SMOOTH AND CLEAN WIPE – FROM THE FIRST REVOLUTION TO THE LAST!

MDC® Doctor Blades

With introducing a variety of coated doctor blades to the Gravure industry Daetwyler SwissTec helped the printers to overcome challenges such as hazing and dragouts. These coated products set new standards for doctor blades in the Gravure industry and brought printers to a higher quality level than previously possible when using uncoated and even other coated doctor blades. Daetwyler SwissTec's continuous research and development now introduces a new product called **OPTILIFE** which can take printers to even higher quality levels. Shorter run lengths in today's market also demand that a quality printed product is achieved within the first few revolutions.

OPTILIFE

Rounded Edge Available

Bevel Angle	10°/20°/30°
Blade Thickness	0.15–0.30 mm (0.006"–0.012")
Tip Thickness	0.080–0.250 mm
Tip Width	1.0/1.3/1.7 mm

The **OPTILIFE** has a new special coating designed to produce an instantaneous smooth and clean wipe. This extremely smooth and durable coating eliminates streaks from the very beginning and maintains this clean wipe throughout the run. The low friction values of this smooth coating result in very low chrome wear, which helps to maintain the integrity of the cylinder surface. | **This special designed coating results in:** Instantaneous defect free print | Gentleness on chrome | Corrosion resistance | Highly suitability for abrasive inks and coatings | Elimination of streaks in both start-up and during production.
